List of Inputs

West Basin

Required Inputs	Unit	Number of inputs	Input Required for Criteria #
Land type (beach, bay, estuary, cliffs, rocky coastline)	beach, bay, estuary, cliffs, rocky coastline	1 per project	1, 11
Required Capacity	MGD	1 per project	2, 3, 19, 21
Land take per unit (linear beach front)	ft	1 per SSI	2, 3
Land take per unit (area of beach front)	sf	1 per SSI	
Number of units	no.	1 per SSI	2, 3, 22
Available beach front	ft	1 per project	2
Available land (offshore and onshore)	acre	1 per project	3
CEQA approved?	Y/N	1 per SSI	4
Available area for drilling	sf	1 per project	5
Topography of the construction zone	flat/moderately uneven/uneven	1 per project	7
Slope of the construction zone	high slope/moderate slope/low slope	1 per project	7
Significant wave height	ft	1 per project	8, 14
Depth to seabed	ft	1 per project	9
Transmissivity	gpd/ft	1 per SSI	11
Overlying conductance	1/d	1 per SSI	11
SSI infrastructure is located in 30 year potentially impacted area and is below the 30 year predicted sea level rise	Y/N	1 per project	12
Rate of change of beach width over 30 years (based on historical aerial	%	1 per project	13
Saturation Index of selected precipitates	none	1 per project	14
Sedimentation Rate	mm/yr	1 per project	14
Silt Density Index	none	1 per SSI	15
Feedwater will be considered extremely impaired source by DDW	Y/N	1 per project	16
Protected species/habitats present	Y/N	1 per project	17
Potential for conflict with existing land use	Y/N	1 per SSI	18
Existing/planned production rate of nearby aquifer	mgd	1 per project	19
Presence of contaminant plume(s) in the vicinity	Y/N	1 per project	20

Draft SSI Feasibility Framework

Notes
SSI = Subsurface Intake
CEQA = California Environmental Quality Act
Hs = significant wave height (Hs), which is the average of the highest one third of wave heights for 30 year record
SI =Saturation Index
mm/yr = millimeter per year
MCL = Maximum Contaminant Level
AL = Action Level

Draft SSI Feasibility Framework
Scoring Matrix
West Basin

The scoring matrix below generates a single score for each SSI for each of the challenge categories. The wieghting accounts for relative importance of specific criteria to different SSIs. For instance a higher weight is used for the clogging criteria for SSI's which are difficult to maintenance (e.g. higher weight for horizontal wells thank for vertical wells).

The raw score for each category is obtained by multiplying the score entered in the feasibility matrix with the corresponding weight below and summing the scores for each category.

The normalized scores allow for clear comparison across SSIs and challenge cateories. They are calculated by dividing the raw for each category by the maximum possible score for that category for each SSI and multiplying by 5. For example a score of 6 for construction for verical well corresponds to a normalize rating of 5, a score of 3 to a normalized rating of 2.5 and a score of 1 to a normlalized rating of 0.8.

The total normalized score for each SSI is obtained by summing the normalized scores for each category; a total normalized score of 25 being the most challenging. All normalizaed scores are shown on the "Normalized Scoring Results" tab

SSI's the are eliminated due to a fatal flaw do not receive a challenge score because they are considered infeasible.

FATAL FLAWS

ID	Fatal Flaw	Required Inputs	Vertical Wells Tests/Analysis	Slant Wells Tests/Analysis	Radial Collectors (Ranney Wells) Tests/Analysis	Horizontal Wells Tests/Analysis	Beach Infiltration Gallery Tests/Analysis	Seabed Infiltration Gallery Tests/Analysis	Water Tunnel Recommended Test/Analysis
1	Land type makes construction of SSI infeasible	Land type (beach, bay, estuary, cliffs, rocky coastline)	No additional tests/analyses required	No additional tests/analyses required	No additional tests/analyses required	No additional tests/analyses required	No additional tests/analyses required	No additional tests/analyses required	No additional tests/analyses required
2	Not sufficient beach front available to construct SSI	Required capacity, Land take per unit, number of units needed, available beach front	**Level 2:** Characterization of Subsurface Geometry and Hydraulic Properties: Grain-Size Analysis / Hydraulic Conductivity / Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests) Hydraulic Calculations/Groundwater Modeling. Review of site-specific potential SSI construction requirements. **Level 3.** Installation and pilot testing.	**Level 2:** Characterization of Subsurface Geometry and Hydraulic Properties: Grain-Size Analysis / Hydraulic Conductivity / Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests) Hydraulic Calculations/Groundwater Modeling. Review of site-specific potential SSI construction requirements. **Level 3.** Installation and pilot testing.	**Level 2:** Characterization of Subsurface Geometry and Hydraulic Properties: Grain-Size Analysis / Hydraulic Conductivity / Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests) Hydraulic Calculations/Groundwater Modeling. Review of site-specific potential SSI construction requirements. **Level 3.** Installation and pilot testing.	**Level 2:** Characterization of Subsurface Geometry and Hydraulic Properties: Grain-Size Analysis / Hydraulic Conductivity / Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests) Hydraulic Calculations/Groundwater Modeling. Review of site-specific potential SSI construction requirements. **Level 3.** Installation and pilot testing.	**Level 2:** Characterization of Subsurface Geometry and Hydraulic Properties. Grain-Size Analysis / Hydraulic Conductivity / Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing) Hydraulic Calculations. Review of site-specific potential SSI construction requirements. **Level 3.** Installation and pilot testing.	**NA if using engineered fill, but if using existing seafloor sediment the following apply** **Level 2:** Characterization of Subsurface Geometry and Hydraulic Properties: Grain-Size Analysi s/ Hydraulic Conductivity / Transmissivity Testing and Evaluation Hydraulic Calculations/Groundwater Modeling. Review of site-specific potential SSI construction requirements. **Level 3.** Installation and pilot testing.	**Level 2:** Characterization of Subsurface Geometry and Hydraulic Properties. Grain-Size Analysis / Hydraulic Conductivity / Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing) Hydraulic Calculations. Review of site-specific potential SSI construction requirements. **Level 3.** Installation and pilot testing.
3	Not sufficient land (onshore or offshore) available to construct SSI	Required Capacity, Land take per unit, number of units needed, available land							
4	SSI project will not be approved through	CEQA analysis	see CEQA section below	see CEQA section below	see CEQA section below	see CEQA section below	see CEQA section below	see CEQA section below	see CEQA section below

SIGNIFICANT CHALLENGES

ID		Challenge	Required Inputs	Vert Wells Tests/Analysis	Slant Wells Tests/Analysis	Radial Collectors (Ranney Wells) Tests/Analysis	Horizontal Wells Tests/Analysis	Beach Infiltration Gallery Tests/Analysis	Seabed Infiltration Gallery Tests/Analysis	Water Tunnel Recommended Test/Analysis
5	Construction	Limited area available for drilling equipment	Available area (in square feet), number of wells	**Available Area** No additional tests/analyses required	**Available Area** No additional tests/analyses required	**Available Area** No additional tests/analyses required	**Available Area** No additional tests/analyses required	**Available Area** No additional tests/analyses required	**Available Area** No additional tests/analyses required	**Available Area** No additional tests/analyses required
6		General complexity of construction	none required	**General Construction Complexity (in any settings)**: No additional tests/analyses required	**General Construction Complexity (in any settings)**: No additional tests/analyses required	**General Construction Complexity (in any settings)**: No additional tests/analyses required	**General Construction Complexity (in any settings)**: No additional tests/analyses required	**General Construction Complexity (in any settings)**: No additional tests/analyses required	**General Construction Complexity (in any settings)**: No additional tests/analyses required	**General Construction Complexity (in any settings)**: No additional tests/analyses required
8		Uneven topography will make construction challenging	Topography (highly uneven, moderately uneven, flat)	**Topography**: **Level 2**: preliminary design assessment	**Topography**: **Level 2**: preliminary design assessment	**Topography**: **Level 2**: preliminary design assessment	**Topography**: **Level 2**: preliminary design assessment	**Slope in the surf zone**: **Level 2**: preliminary design assessment	**Slope of the seabed**: **Level 2**: preliminary design assessment. Geophysical bathymetric survey	**Topography/Slope:** NA
9		Wave energy will make construction challenging	Significant wave height, Hs (in feet). Hs is average of highest 1/3 of wave heights. See US Army Corps of Engineers Wave Information.	**Wave energy:** NA	**Wave energy:** NA	**Wave energy:** NA	**Wave energy:** NA	**Wave energy:** **Level 2**: preliminary design assessment. Historical Aerial Photo survey. Compilation and review of USACOE & NOAA data etc. **Level 3**: Coastal Evolution Modeling	**Wave energy:** **Level 2**: preliminary design assessment. Historical Aerial Photo survey. Compilation and review of USACOE & NOAA data etc. **Level 3**: Coastal Evolution Modeling	**Wave energy (Only applies if offshore construction is necessary)** **Level 2**: preliminary design assessment. Historical Aerial Photo survey. Compilation and review of USACOE and NOAA data etc. **Level 3**: Coastal Evolution Modeling
10		Depth to seabed will make construction challenging	Depth to seabed	**Depth to seabed:** NA	**Depth to seabed:** NA.	**Depth to seabed:** NA.	**Depth to seabed:** NA.	**Depth to seabed:** NA.	**Depth to seabed:** **Level 2 & 3**. Review bathymetric data. Geophysical bathymetric survey	**Depth to seabed (Only applies if offshore construction is necessary):** **Level 2 & 3**. Review bathymetric data. Geophysical bathymetric survey
11		Land type will make construction challenging	Land type (beach, bay, estuary, cliffs, rocky coastline)	**Land type:** No additional tests/analyses required	**Land type:** No additional tests/analyses required	**Land type:** No additional tests/analyses required	**Land type:** No additional tests/analyses required	**Land type:** NA	**Land type:** NA	**Land type:** NA
12	Operation (Intake)	Geologic conditions will limit intake rate	Hydraulic conductivity, aquifer type, (confined, semi-confined, unconfined), sediment thickness	**Transmissivity:** **Level 2 & 3:** Characterization of Subsurface Hydraulic Properties: Grain-Size Analysis / Hydraulic Conductivity / Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests)	**Transmissivity:** **Level 2 & 3:** Characterization of Subsurface Hydraulic Properties: Grain-Size Analysis / Hydraulic Conductivity / Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests)	**Transmissivity:** **Level 2 & 3:** Characterization of Subsurface Hydraulic Properties: Grain-Size Analysis / Hydraulic Conductivity / Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests)	**Transmissivity:** **Level 2 & 3:** Characterization of Subsurface Hydraulic Properties: Grain-Size Analysis / Hydraulic Conductivity / Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests)	**Transmissivity: NA if engineered fill.**	**Transmissivity: NA if engineered fill.**	**Transmissivity:** **Level 2 & 3:** Characterization of Subsurface Hydraulic Properties: Grain-Size Analysis / Hydrauic Conductivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing). Correlation between on and offshore stratigraphy hydraulic properties.
				Overlying Conductance [units of (ft/d)(1/ft) = 1/day] **Level 2 & 3**: Characterization of Subsurface Hydraulic Properties: Grain-Size Analysis / Hydraulic Conductivity / Transmissivity Testing and Evaluation (e.g. borings, laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests, geophysical surveys)	**Overlying Conductance** [units of (ft/d)(1/ft) = 1/day] **Level 2 & 3**: Characterization of Subsurface Hydraulic Properties: Grain-Size Analysis / Hydraulic Conductivity / Transmissivity Testing and Evaluation (e.g. borings, laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests, geophysical surveys)	**Overlying Conductance** [units of (ft/d)(1/ft) = 1/day] **Level 2 & 3**: Characterization of Subsurface Hydraulic Properties: Grain-Size Analysis / Hydraulic Conductivity / Transmissivity Testing and Evaluation (e.g. borings, laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests, geophysical surveys)	**Overlying Conductance** [units of (ft/d)(1/ft) = 1/day] **Level 2 & 3**: Characterization of Subsurface Hydraulic Properties: Grain-Size Analysis / Hydraulic Conductivity / Transmissivity Testing and Evaluation (e.g. borings, laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests, geophysical surveys)	**Overlying Conductance:** **NA if engineered fill.**	**Overlying Conductance:** **NA if engineered fill.**	**Overlying Conductance** [units of (ft/d)(1/ft) = 1/day] **Level 2 & 3**: Characterization of Subsurface Hydraulic Properties: Grain-Size Analysis / Hydraulic Conductivity / Transmissivity Testing and Evaluation (e.g. borings, laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests, geophysical surveys)
13		Significant measures will be required to protect SSI against anticipated sea level rise	SSI infrastructure would be located in 30 year potentially impacted area (Y/N) SSI infrastructure would be located above 30 year predicted sea level rise (Y/N)	No additional tests/analyses required	No additional tests/analyses required	No additional tests/analyses required	No additional tests/analyses required	No additional tests/analyses required	No additional tests/analyses required	No additional tests/analyses required
14		Significant measures will be required to protect or restore intake works from erosion or scour.	Rate of change of beach width over time Wave energy	**Rate of erosion** No additional tests/analyses required	**Rate of erosion** No additional tests/analyses required	**Rate of erosion** No additional tests/analyses required	**Rate of erosion** No additional tests/analyses required	**Rate of erosion** No additional tests/analyses required	**Rate of erosion** No additional tests/analyses required	**Rate of erosion** No additional tests/analyses required
				Potential for scouring of the seabed: NA	**Potential for scouring of the seabed:** NA	**Potential for scouring of the seabed:** NA	**Potential for scouring of the seabed:** **Level 2**: Historical Aerial Photo Survey. Compilation and review of NOAA data etc. **Level 3**: Coastal Evolution Model	**Potential for scouring of the seabed:** **Level 2**: Historical Aerial Photo Survey. Compilation and review of NOAA data etc. **Level 3**: Coastal Evolution Model	**Potential for scouring of the seabed:** **Level 2**: Historical Aerial Photo Survey. Compilation and review of NOAA data etc. **Level 3**: Coastal Evolution Model	**Potential for scouring of the seabed is:** NA
15		Characteristics of feedwater and potential mixing are conducive to precipitating materials that will cause frequent and significant clogging of intake works	Saturation Index for mangangese oxides, iron oxides, calcium carbonate **[NEED TO DEFINE PRECIPITATES TO CONSIDER]** Sedimentation Rate	**Saturation Index (SI)** **Level 2:** Geophysical Surveys. Groundwater samples and chemical analysis. Geochemical modeling. **Level 3:** Pilot testing and chemical analyses. Advanced geochemical modeling.	**Saturation Index (SI)** **Level 2:** Geophysical Surveys. Groundwater samples and chemical analysis. Geochemical modeling. **Level 3:** Pilot testing and chemical analyses. Advanced geochemical modeling.	**Saturation Index (SI)** **Level 2:** Geophysical Surveys. Groundwater samples and chemical analysis. Geochemical modeling. **Level 3:** Pilot testing and chemical analyses. Advanced geochemical modeling.	**Saturation Index (SI)** **Level 2:** Geophysical Surveys. Groundwater samples and chemical analysis. Geochemical modeling. **Level 3:** Pilot testing and chemical analyses. Advanced geochemical modeling.	**Potential for materials to precipitate out of** **NA**	**Potential for materials to precipitate out of** **NA**	**Saturation Index (SI)** **Level 2:** Geophysical Surveys. Groundwater samples and chemical analysis. Geochemical modeling. **Level 3:** Pilot testing and chemical analyses. Advanced geochemical modeling.
				Sedimentation rate: NA	**Sedimentation rate: NA**	**Sedimentation rate: NA**	**Sedimentation rate:** **Level 2.** Borings and dating of seafloor sediment profile **Level 3.** Coastal Evolution Model	**Sedimentation rate:** **Level 2.** Borings and dating of seafloor sediment profile **Level 3.** Coastal Evolution Model	**Sedimentation rate:** **Level 2.** Borings and dating of seafloor sediment profile **Level 3.** Coastal Evolution Model	**Sedimentation rate: NA**

SIGNIFICANT CHALLENGES

ID		Challenge	Required Inputs	Vert Wells Tests/Analysis	Slant Wells Tests/Analysis	Radial Collectors (Ranney Wells) Tests/Analysis	Horizontal Wells Tests/Analysis	Beach Infiltration Gallery Tests/Analysis	Seabed Infiltration Gallery Tests/Analysis	Water Tunnel Recommended Test/Analysis
16	Operation (Treatment)	Water quality issues likely to cause frequent and significant fouling of treatment works	Silt Density Index (SDI)	**Silt Density Index of feedwater (SDI15):** **Level 2**. Sample and analyze groundwater from coastal wells. **Level 3**. Intall well and pilot test.	**Silt Density Index of feedwater (SDI15):** **Level 2**. No level 2 tests/analyses available **Level 3**. Intall well and pilot test.	**Silt Density Index of feedwater (SDI15):** **Level 2**. No level 2 tests/analyses available **Level 3**. Intall well and pilot test.	**Silt Density Index of feedwater (SDI15):** **Level 2**. No level 2 tests/analyses available **Level 3**. Intall well and pilot test.	**Silt Density Index of feedwater (SDI15):** **Level 2**. No level 2 tests/analyses available **Level 3**. Intall well and pilot test.	**Silt Density Index of feedwater (SDI15):** **Level 2**. No level 2 tests/analyses available **Level 3**. Intall well and pilot test.	**Silt Density Index of feedwater (SDI15):** **Level 2**. No level 2 tests/analyses available **Level 3**. Intall well and pilot test.
17		Potential for poor feedwater quality to impose additional permitting requirements in order to be used as a sourcewater for drinking water	Chemicals in feedwater exceed 10 times an MCL or action level (AL) based on chronic health effects (Y/N) Chemicals in feedwater exceed 3 times an MCL or AL based on acute health effects (Y/N) Feedwater is a surface water that requires more than 4 log Giardia/5 log virus reduction (Y/N) Feedwater is extremely threatened with contamination due to proximity to known contaminating activities (Y/N) Feedwater contains a mixture of contaminants of health concern (Y/N) Feewater is designed to intercept known contaminants of health concern (Y/N)	**Level 2**. Sample and analyze groundwater from coastal wells. **Level 3**. Install well, pilot test and analyze samples.	**Level 2**. Sample and analyze groundwater from coastal wells. **Level 3**. Install well, pilot test and analyze samples.	**Level 2**. Sample and analyze groundwater from coastal wells. **Level 3**. Install well, pilot test and analyze samples.	**Level 2**. Sample and analyze soil from seabed **Level 3**. Install well, pilot test and analyze samples.	**Level 2**. Sample and analyze soil from beach **Level 3**. Install, pilot test and analyze samples.	**Level 2**. Sample and analyze soil from seabed **Level 3**. Install, pilot test and analyze samples.	**Level 2**. Sample and analyze soil from seabed **Level 3**. Install, pilot test and analyze samples.
18	Potential Environmental Impacts	Potential impact to protected species or habitats will make CEQA approval challenging	Is(are) protected species/habitat(s) present at the proposed site (Y/N)	**Level 2**: Site-specific ecological characteriation. Subsurface Geometry and Hydraulic Properties: Grain-Size Analysis/Hydrauic Conductivity/Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests) Hydraulic Calculations/Groundwater Modeling. Review of site-specific potential SSI construction and operation requirements and potential ecological impacts. **Level 3**: Installation and pilot testing to evaluate potential impact. (e.g. pumping impact to coastal margin wetlands).	**Level 2**: Site-specific ecological characteriation. Subsurface Geometry and Hydraulic Properties: Grain-Size Analysis/Hydrauic Conductivity/Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests) Hydraulic Calculations/Groundwater Modeling. Review of site-specific potential SSI construction and operation requirements and potential ecological impacts. **Level 3**: Installation and pilot testing to evaluate potential impact. (e.g. pumping impact to coastal margin wetlands).	**Level 2**: Site-specific ecological characteriation. Subsurface Geometry and Hydraulic Properties: Grain-Size Analysis/Hydrauic Conductivity/Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests) Hydraulic Calculations/Groundwater Modeling. Review of site-specific potential SSI construction and operation requirements and potential ecological impacts. **Level 3**: Installation and pilot testing to evaluate potential impact. (e.g. pumping impact to coastal margin wetlands).	**Level 2**: Site-specific ecological characteriation. Subsurface Geometry and Hydraulic Properties: Grain-Size Analysis/Hydrauic Conductivity/Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests) Hydraulic Calculations/Groundwater Modeling. Review of site-specific potential SSI construction and operation requirements and potential ecological impacts. **Level 3**: Installation and pilot testing to evaluate potential impact. (e.g. pumping impact to coastal margin wetlands).	**Level 2**: Site-specific ecological characteriation. Subsurface Geometry and Hydraulic Properties: Grain-Size Analysis/Hydrauic Conductivity/Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests) Hydraulic Calculations/Groundwater Modeling. Review of site-specific potential SSI construction and operation requirements and potential ecological impacts. **Level 3**: Installation and pilot testing to evaluate potential impact.	**Level 2**: Site-specific ecological characteriation. Subsurface Geometry and Hydraulic Properties: Grain-Size Analysis/Hydrauic Conductivity/Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests) Hydraulic Calculations/Groundwater Modeling. Review of site-specific potential SSI construction and operation requirements and potential ecological impacts. **Level 3**: Installation and pilot testing to evaluate potential impact.	**Level 2**: Site-specific ecological characteriation. Subsurface Geometry and Hydraulic Properties: Grain-Size Analysis/Hydrauic Conductivity/Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests) Hydraulic Calculations/Groundwater Modeling. Review of site-specific potential SSI construction and operation requirements and potential ecological impacts. **Level 3**: Installation and pilot testing of single offshore well to evaluate potential impact
19		Potential to conflict with existing land use will make CEQA approval process challenging	Is there a potential for the SSI conflict with existing land use? (Y/N)	**Level 2**: Zoning and planning review. Public meetings. Review of site-specific potential SSI construction and operation requirements.	**Level 2**: Zoning and planning review. Public meetings. Review of site-specific potential SSI construction and operation requirements.	**Level 2**: Zoning and planning review. Public meetings. Review of site-specific potential SSI construction and operation requirements.	**Level 2**: Zoning and planning review. Public meetings. Review of site-specific potential SSI construction and operation requirements.	**Level 2**: Zoning and planning review. Public meetings. Review of site-specific potential SSI construction and operation requirements.	**Level 2**: Zoning and planning review. Public meetings. Review of site-specific potential SSI construction and operation requirements.	**Level 2**: Zoning and planning review. Public meetings. Review of site-specific potential SSI construction and operation requirements.
20		Potential to disrupt existing/planned groundwater pumping or injection will make CEQA approval challenging	Required capacity of SSI, existing/planned production rate of nearby aquifer	**Level 2**: Subsurface Geometry and Hydraulic Properties: Grain-Size Analysis / Hydraulic Conductivity / Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests) Hydraulic Calculations/Groundwater Modeling. Review of existing groundwater pumping or injection in the same basin or aquifer system. Hydraulic Calculations/Groundwater Modeling to evaluate potential impact. **Level 3**: Pilot test pumping and evaluation of influence.	**Level 2**: Subsurface Geometry and Hydraulic Properties: Grain-Size Analysis / Hydraulic Conductivity / Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests) Hydraulic Calculations/Groundwater Modeling. Review of existing groundwater pumping or injection in the same basin or aquifer system. Hydraulic Calculations/Groundwater Modeling to evaluate potential impact. **Level 3**: Pilot test pumping and evaluation of influence.	**Level 2**: Subsurface Geometry and Hydraulic Properties: Grain-Size Analysis / Hydraulic Conductivity / Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests) Hydraulic Calculations/Groundwater Modeling. Review of existing groundwater pumping or injection in the same basin or aquifer system. Hydraulic Calculations/Groundwater Modeling to evaluate potential impact. **Level 3**: Pilot test pumping and evaluation of influence.	**Level 2**: Subsurface Geometry and Hydraulic Properties: Grain-Size Analysis / Hydraulic Conductivity / Transmissivity Testing and Evaluation (e.g. laboratory grain-size analysis and permeability testing, CPT pore pressure dissipation testing, specific capacity, aquifer tests) Hydraulic Calculations/Groundwater Modeling. Review of existing groundwater pumping or injection in the same basin or aquifer system. Hydraulic Calculations/Groundwater Modeling to evaluate potential impact. **Level 3**: Pilot test pumping and evaluation of influence.	Not applicable	Not applicable	Not applicable
21		Potential to mobilize contaminant plumes will make CEQA approval challenging	Are there contaminant plumes in the vicinity of the SSI? (Y/N)	**Level 2**: Review of groundwater contamination plume in the same basin or aquifer system. Hydraulic Calculations/Groundwater Modeling to evaluate potential influence of SSI pumping on plume. **Level 3**: Installation and pilot testing to evaluate potential impact on plume migration	**Level 2**: Review of groundwater contamination plume in the same basin or aquifer system. Hydraulic Calculations/Groundwater Modeling to evaluate potential influence of SSI pumping on plume. **Level 3**: Installation and pilot testing to evaluate potential impact on plume migration	**Level 2**: Review of groundwater contamination plume in the same basin or aquifer system. Hydraulic Calculations/Groundwater Modeling to evaluate potential influence of SSI pumping on plume. **Level 3**: Installation and pilot testing to evaluate potential impact on plume migration	**Level 2**: Review of groundwater contamination plume in the same basin or aquifer system. Hydraulic Calculations/Groundwater Modeling to evaluate potential influence of SSI pumping on plume. **Level 3**: Installation and pilot testing to evaluate potential impact on plume migration	Not applicable	Not applicable	Not applicable
22	Risk (Uncertainty)	Lack of demonstrated success of SSI in similar setting to produce a similar capacity imposes significant risk and design challenges to the project	Required capacity, number of units/area of gallery Use inputs from ID 2 and 3 for required number of units/area	**An SSI system exists that has produced the required capacity** No additional tests/analysis required **An SSI system exists with X% of the required number of SSI units.** No additional tests/analyses required	**An SSI system exists that has produced the required capacity** No additional tests/analysis required **An SSI system exists with X% of the required number of SSI units.** No additional tests/analyses required	**An SSI system exists that has produced the required capacity** No additional tests/analysis required **An SSI system exists with X% of the required number of SSI units.** No additional tests/analyses required	**An SSI system exists that has produced the required capacity** No additional tests/analysis required **An SSI system exists with X% of the required number of SSI units.** No additional tests/analyses required	**An SSI system exists that has produced the required capacity** No additional tests/analysis required **An SSI system exists with X% of the required gallery area.** No additional tests/analyses required	**An SSI system exists that has produced the required capacity** No additional tests/analysis required **An SSI system exists with X% of the required gallery area.** No additional tests/analyses required	**An SSI system exists that has produced the required capacity** No additional tests/analysis required **An SSI system exists with X% of the required number of SSI units.** No additional tests/analyses required

Notes
SSI = Subsurface Intake
CPT = Cone Penetration Test
CEQA = California Environmental Quality Act
NOAA = National Oceanic and Atmospheric Administration
SI =Saturation Index
